The idea of personalizable software is fashionable today. I explored it in a number of software prototypes a decade or two earlier. The perspectives mechanism in Hermes, my dissertation software system, was an initial major initiative in this direction. WebNet was a follow-up system to integrate the perspective mechanism into discussion-forum collaboration software. Subsequent systems explored personalization mechanisms in systems for work and for learning, including TCA for teachers developing and sharing curriculum and systems for automated critics in design systems or reviewers of journal articles. In each case, the mechanisms were intended to support users to view and discuss materials from their personal perspectives and to share those views with others to encourage building group perspectives. The volume is organized in terms of essays on (a) structured hypermedia, (b) personalizable software, (c) software perspectives and (d) applications to health care, education and publishing. The new M&A bible. Few actions can change the value of a company—and its competitive future—as quickly and dramatically as an acquisition. Yet most companies fail to create shareholder value from these deals, and in many cases they destroy it. It doesn't have to be this way. In *The Synergy Solution*, Deloitte's Mark Sirower and Jeff Weirens show acquirers how to develop and execute an M&A strategy—end to end—that not only avoids the pitfalls that so many companies fall into but also creates real, long-term shareholder value. This strategy includes how to: Become a prepared "always on" acquirer Test the investment thesis and DCF valuation of a deal Plan for a successful Announcement Day, and properly communicate synergy promises to investors and other stakeholders Realize those promised synergies through integration planning and post-close execution Manage change and build a new, combined organization Sirower and Weirens provide invaluable background to those considering M&A, laying out the issues they have to consider, how to analyze them, and how to plan and execute the deal effectively. They also show those who have already started the process of M&A how to maximize their chances of success. There's an art and a science to getting mergers and acquisitions right, and this powerful book provides the insights and strategies acquirers need to find success at every stage of an often complex and perilous process. Available online: <https://pub.norden.org/temanord2022-551/> Low-carbon and circular public procurement aims at reducing climate emissions, promoting value retention, closed material loops and savings in resource use. In the construction and renovation of buildings, attention is paid to the planning phase as well as minimizing material and demolition waste and recycling waste appropriately. In the construction of road infrastructure, significant savings in material and money could be achieved by utilizing secondary materials from the site or nearby. This study examined and illustrated the approaches of low-carbon and circular construction and their synergies and trade-offs. Emissions and potential emission savings were calculated in three case studies representing different aspects of circular construction. The life we make Reflects the truth of who we are! The only things in the universe we can control are our choices. By making choices, we decide who we are and develop our truth; this determines everything

else in our life. Choices can be based on our beliefs and conditioning, and we will suffer the emotional stress which goes with them. Or we can choose to be self-aware, realise our higher truth, and live in peace and joy. Which do you choose? The first rule for achieving self-awareness is to seek experiential guidance. So if you wish to discover yourself and grow spiritually, herein you may find light to illuminate your experiences. Make no mistake this is not for the faint-hearted. But it can change your life. Trust in yourself, listen to your heart, and feel self-love. Questions about the book? Yet, in many congregations there is a heavy imbalance in the ownership of ministry. Clergy and paid staff are seen as God's agents in the world, and congregants as occasional participants. Sometimes, clergy and other leaders perpetuate this imbalance. Ann Michel presents a more inclusive, collaborative understanding of ministry, which affirms the gifts and calling of both clergy and lay servants. She uses the concept of "synergy" as a theological framework undergirding this approach. Michel lays out an inclusive and collaborative paradigm of ministry affirming the work of both lay and clergy servants. Synergy also provides practical advice on the day-to-day skills of synergistic or collaborative ministry - how to engage others in ministry, how to build teams, how to manage meetings, how to develop others as leaders, etc. The book helps church workers, paid and unpaid, understand how their ministry relates to the mission of God and the ministry of the church, and provides practical guidance on the interpersonal ministry skills essential to any expression of collaborative ministry. "Synergy is both a practical and deeply spiritual resource that helps provide a more collaborative way of thinking about ministry shared between clergy and laity. Ann has captured the challenges that can present themselves as laity serve in ministry not only from her research but also from her personal experience as a lay person and respected Seminary theologian, and she offers practical ways to equip laity to fully live in this call of lay servants and lay staff members. As a lay person who has served on a church staff for more than 23 years, understanding this synergistic energy articulated so well in Ann's writing has reignited my passion and affirmed my call." - Debi Williams Nixon, Managing Executive Director, The United Methodist Church of the Resurrection

In the context of the NASA Deep Impact space mission, comet 9P/Tempel1 has been at the focus of an unprecedented worldwide long-term multi-wavelength observation campaign. The comet was also studied throughout its perihelion passage by various sources including the Deep Impact mission itself, the Hubble Space Telescope, Spitzer, Rosetta, XMM and all major ground-based observatories in a wavelength band from cm-wave radio astronomy to x-rays. This book includes the proceedings of a meeting that brought together an audience of theoreticians and observers - across the electromagnetic spectrum and from different sites and projects - to make full use of the massive ground-based observing data set. The coherent presentation of all data sets illustrates and examines the various observational constraints on modelling the cometary nucleus, cometary gas, cometary plasma, cometary dust, and the comet's surface and its activity. 1 2 Michel M. VERSTRAETE and Martin BENISTON 1 Space Applications Institute, EC Joint Research Centre, Ispra, Italy 2 Department of Geography, University of Fribourg, Switzerland This volume contains the proceedings of the workshop entitled "Satellite Remote Sensing and Climate Simulations: Synergies and Limitations" that took place in Les Diablerets, Switzerland, September 20-24, 1999. This international scientific conference aimed at addressing the current and potential role of satellite remote sensing in climate modeling, with a particular focus on land surface processes and atmospheric aerosol characterization. Global and regional circulation models incorporate our knowledge of the dynamics of the Earth's atmosphere. They are used to predict the evolution of the weather and climate. Mathematically, this system is represented by a set of partial differential equations whose solution requires initial and boundary conditions. Limitations in the accuracy and geographical distribution of these constraints, and intrinsic mathematical sensitivity to these conditions do not allow the identification of a unique solution (prediction). Additional observations on the climate system are thus used to constrain the forecasts of the mathematical model to remain close to the observed state of the system. This book brings together a stellar group of international researchers working in such diverse fields as business studies, religious studies, educational studies and communication studies. In critical pursuit of how to set intercultural competence to work in today's society, the contributors to this indispensable volume elucidate with passion and astuteness the challenges and potentials of interculturality and interreligiosity. The success of development programs depends on the role of underlying institutions and the impact synergies from closely related programs. Existing literature has limitations in accounting for these critical factors. This paper fills this gap by developing a methodology, which can quantify both the institutional roles in impact generation and the impact synergies from related programs. The methodology is applied to the Kala Oya Basin in Sri Lanka for evaluating the impacts of three development programs and 11 institutions on food security. The results provide valuable insights on the relative roles of institutions and the varying flow of impact synergies both within and across impact pathways. In a clear and professional language, Dr. Rami Ben-Yshai shares the secrets of organizational synergy. *Organizational Synergy - A Practical Guide* is a must-read for every manager, entrepreneur, business owner and organizational consultant who wants to profit and succeed in today's business environment. FOCAPD-19/Proceedings of the 9th International Conference on Foundations of Computer-Aided Process Design, July 14 - 18, 2019, compiles the presentations given at the Ninth International Conference on Foundations of Computer-Aided Process Design, FOCAPD-2019. It highlights the meetings held at this event that brings together researchers, educators and practitioners to identify new challenges and opportunities for process and product design. This synergy I consider more urgent than ever in this day and age. More and more people are aware of the influence of spiritual energies to the visible gross material plane through the invisible subtle levels, get therein more and more insight and perceive healing. They develop talents and gifts which they apply with increasing success to themselves and others. This results in new occupations in the medical system (field of bioenergetics, psycho-energetics and spiritual healing). The aim of this working-out is to motivate people in the field of medical system to become familiar with the hidden causes of disease symptoms and specifically with the symptoms of the new time. This enables them to get better decision support in the treatment of disease symptoms. Seventeen Nordic and international labelling and certification schemes met at an international workshop on dialogue and cooperation at Lund's University in November 2011. With this meeting among schemes across fields such as the environment, organic, fair trade and sustainability, NCM Working Group on Sustainable Consumption and Production and Nordic Ecolabelling has taken a first step to create transparency and exchange of experience between label schemes with relevance for Sustainable Consumption and Production. Prior to the workshop in Lund the consulting firm Ecostory mapped information schemes on the Nordic markets and carried out a stakeholder survey. Ecostory found four megatrends that are important for schemes within SCP: convergence towards sustainability, information overload, regulation as driver, and national/regional labels on global markets. This report presents findings from the mapping of schemes, the stakeholder survey and the workshop on dialogue and cooperation. Ecostory describes 10 key challenges and recommends policy responses and gives tentative proposals to follow-up and support cooperation between the Swan and other information systems. Intended to demystify what has historically been a closed-door world, The Recruiting Guide to Investment Banking provides insights into many of the formal and informal aspects of working on Wall Street. Signatories of Paris Agreement outlined their post-2020 climate actions, known as their Intended Nationally Determined Contributions (I)NDCs. This study focuses on potential synergies between adaptation and mitigation in the (I)NDCs. It pays particular attention to the sectors of forestry, agriculture, energy and urban development. It draws on a review of climate change financing literature, and an analysis of the (I)NDCs and the financial and policy frameworks and programmes that make up global climate change financing structure, notably the texts of the Paris Agreement. The report contains recommendations for Nordic stakeholders to drive further synergies between mitigation and adaptation. We live in times of unprecedented turbulence and uncertainty and we are losing faith in our ability to organise ourselves to deal with it. The traditional 'top down' functional hierarchy doesn't feel like it works as well as it used to, and new generations of workers increasingly demand something a better organisational experience and career that their predecessors had to settled for. But when we look for an alternative, we are faced with a miasma of competing claims for different organising principles. Do we need to be purpose led or profit driven? Focussed or flexible? More centralised or decentralised? Hierarchical or networked? Agile, Lean or driven by scale? And should we all be aiming to become 'teal' organisations? This situation is confusing, and it is perilous. It is also unnatural - in a very fundamental sense - because it demonstrates that we have failed to learn nature's tricks about how organisations can survive and thrive. In any kind of environment. No matter how turbulent and unpredictable. The remedy prescribed in this book is not a choice between 'this' or 'that, it is about balance. Or more specifically maintaining a set of dynamic balances that continuously shift to tame the complexity faced, and created, by organisations. Balance begets calm and poise. Calm and poise beget clarity of thought, decisiveness and agility. This book paints a picture of what these balances are and how they work. It helps readers to describe and make sense of the mess and muddle of organisational life, to design healthy workplaces and to diagnose and cure diseased ones. It can do this because the book is not a manifesto of hope or wishful thinking. It brings together esoteric knowledge amassed over decades about how systems actually work (or don't) in a form that is both accessible and practical. Amongst other things you will learn: · What creates organisational complexity and how to go about taming it · How to achieve economies of scale without incurring diseconomies of scale · How to promote freedom to act without sacrificing organisational order · About the universal law of organisation · About the

five structure pillars and · The six balances essential for organisations to be viable · How to use describe, diagnose and treat organisational ills and design healthier ones · How to 'bake in' resilience · How to nurture and exploit the power of self organisation · How to be both stable and nimble, agile and lean and to exploit and explore To a curious reader this book is a key to a world of powerful but little understood ideas. For a management practitioner it provides a new perspective on familiar problems and a platform for action. And it helps a leader to grasp the essence of what is and reimagine what could be. This report provides an international comparative analysis and policy advice to countries on how evaluation and assessment arrangements can be embedded within a consistent framework to improve the quality, equity and efficiency of school education. In the age of digital media, superheroes are no longer confined to comic books and graphic novels. Their stories are now featured in films, video games, digital comics, television programs, and more. In a single year alone, films featuring Batman, Spider-Man, and the Avengers have appeared on the big screen. Popular media no longer exists in isolation, but converges into complex multidimensional entities. As a result, traditional ideas about the relationship between varying media have come under striking revision. Although this convergence is apparent in many genres, perhaps nowhere is it more persistent, more creative, or more varied than in the superhero genre. Superhero Synergies: Comic Book Characters Go Digital explores this developing relationship between superheroes and various forms of media, examining how the superhero genre, which was once limited primarily to a single medium, has been developed into so many more. Essays in this volume engage with several of the most iconic heroes—including Batman, Hulk, and Iron Man—through a variety of academic disciplines such as industry studies, gender studies, and aesthetic analysis to develop an expansive view of the genre's potency. The contributors to this volume engage cinema, comics, video games, and even live stage shows to instill readers with new ways of looking at, thinking about, and experiencing some of contemporary media's most popular texts. This unique approach to the examination of digital media and superhero studies provides new and valuable readings of well-known texts and practices. Intended for both academics and fans of the superhero genre, this anthology introduces the innovative and growing synergy between traditional comic books and digital media. In recent years there has been a growing interest to extend classical methods for data analysis. The aim is to allow a more flexible modeling of phenomena such as uncertainty, imprecision or ignorance. Such extensions of classical probability theory and statistics are useful in many real-life situations, since uncertainties in data are not only present in the form of randomness --- various types of incomplete or subjective information have to be handled. About twelve years ago the idea of strengthening the dialogue between the various research communities in the field of data analysis was born and resulted in the International Conference Series on Soft Methods in Probability and Statistics (SMPS). This book gathers contributions presented at the SMPS'2012 held in Konstanz, Germany. Its aim is to present recent results illustrating new trends in intelligent data analysis. It gives a comprehensive overview of current research into the fusion of soft computing methods with probability and statistics. Synergies of both fields might improve intelligent data analysis methods in terms of robustness to noise and applicability to larger datasets, while being able to efficiently obtain understandable solutions of real-world problems. This book gives an overview of recent integrated and inter-disciplinary approaches between chemical experiment and theory in a variety of fields, from polymer science to materials chemistry and ranging from the design of tailored properties to catalysis and reactivity, building on the well-established success of Density Functional Theory as the foremost quantum chemical method to provide qualitative and quantitative interpretation of results from the chemical laboratory. The combination of several characterization techniques with an understanding at the molecular level of chemical and physical phenomena are the main focal point of the subject matter.
